## Projects

### Hospitalcare

Mar 2021 - Nov 2021 (8 months)

**Company:** Hospital Official Powered By Netsole Technology

<http://hospitalcare.com/>

**Tools:** Laravel, Ajax, Html, Css, Bootstrap, JQuery, MySQL, javascript

This is an in-house Project.

I am working on its maintenance and add some modules.

This application is based on multiple users which assign multiple roles and Permissions-

This site is used for Doctors, Patients, Doctor Assistance and medical store -

Doctors add your patients and specialities in these site-

set your patients records in these website-

patients come to our website to appointment any doctor and any labs-

User used this website to buy a medicine-

### CareAll360

Oct 2020 - Nov 2021 (1.1 years)

**Company:** Hospital Official Powered By Netsole Technology

<https://careall360.com/>

**Tools:** Laravel, RESTFUL API, React.Js & MySQL

This is SaaS's base Project.

My role is full stack developer in this project.

I am working on some modules on this Project.

Its basic concept of this project is based on multiple users-

Doctors register yourself in these application-

Using this application doctor sets bundles of patients records easily save -

its main functionality is patient book your appointment from doctor using this application-

in this system we provide the functionality of chat and video calling to patients and doctor using twilio Api-

### RTC System

Oct 2020 - Mar 2021 (5 months)

**Company:** Bearplex / Bearplex

<rtc.bearplex.com>

**Tools:** Laravel Backend Developer

#### RTC System

- **RTC system is like a Zoom meeting system**
- **In this system My role is maintain the website**
- **This website we use RTCWeb api to communicate video, audio conference and share screen etc**
- **We use laravel for backend and reactJS for frontend**
- **My role is make an Api's using JWT package for Authentication/Authorization**

### Bidding Management system

Apr 2020 - Sep 2020 (5 months)

**Company:** VU Software House / Virtual university

[BMS](#)

**Tools:** Php, HTML, CSS, JAVASCRIPT, AJAX, RESTFUL API & MySQL

- The aim of this project is to develop a web based automated system named as "Bidding Management System".
- In this system, there are three types of users Admin, Team Owner and users. All users will access this application after proper login authentication system.
- Admin will add the player's role wise and details of the players, admin will add coaching staff and cricket stadium. Team owner will be able to bid on the players category wise, and also can apply for Coach and be able to view everything.
- The user will be able to buy tickets for an event. This system would be transparent anyone can view the PSL auction. The Bidding Management System will be a fully cloud-based system.

**Company:** VU Software House

[shopway.cf](http://shopway.cf)

**Tools:** Laravel Framework

- Shopway is an online Mall management system with some extra functionality.
- Mall Admin can add/assign of the mall and can configure it. He can also add/assign shops to shop admins.
- Shop Admin show inventory weather for online selling or just for showing products on the portal.
- Customers can buy products online from those shops which are providing online selling.
- Customers activities/visits will be logged into system and states (No of visits, total sale, most visited area of mall) will be generated from these logged activities.
- Mall and Shop admins can see these stats and make decisions accordingly.
- Shop admins create advertisements and discounts through notifications and these notifications will be sent to customers on their previous interests and visited locations. Shop admin can pay his rent through smart contract.
- I also created the Project API for mobile application development.
